Seat planning: the answer

1,200-1,575 seats; plan about 1,400

2000 people attend 3 days per week. The average daily load is 1,200, but desk capacity must cover the busiest weekday.

Hard floor

1,200

Perfect staggering; zero tolerance

Managed

1,365

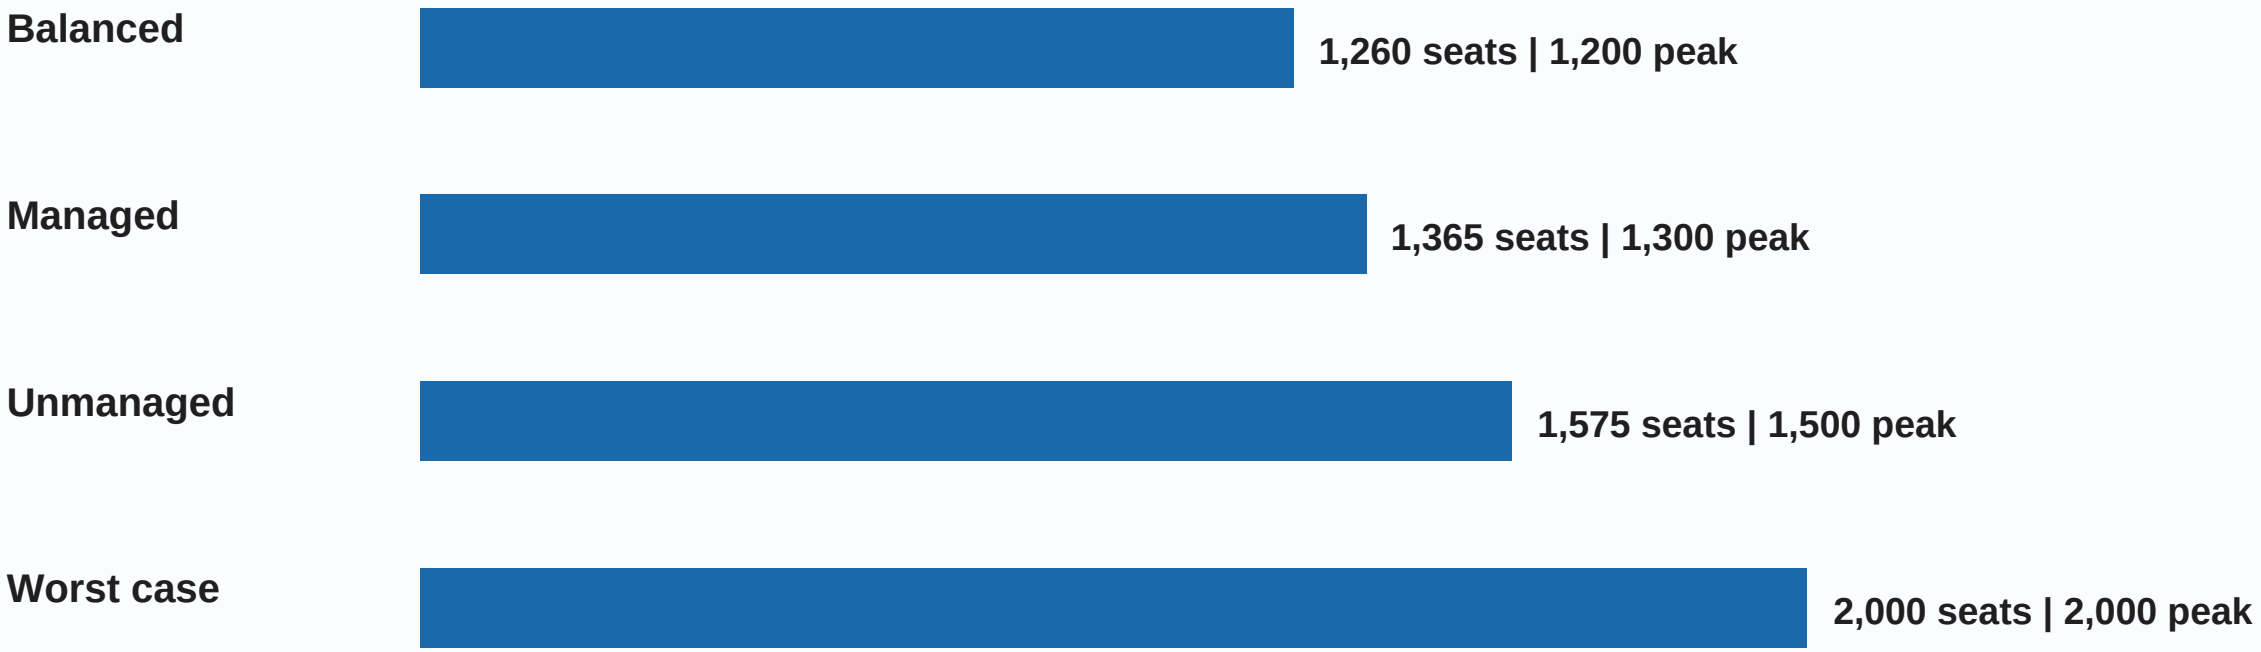
Anchor days + soft cap + 5% buffer

Recommendation

1,400

Managed peak plus contingency / overflow

Scenario range: peak day drives seats



A: balanced 60/60/60/60/60. B: managed 50/65/65/65/55. C: unmanaged 45/70/75/70/40. B/C profiles are modeling assumptions.

Why policy and booking matter

Independent randomness

1,236 people

~3% above the 1,200 mean

Correlated weekday behavior

Up to 1,575 seats

Teams choosing the same days cause the range

The main capacity lever is policy and booking design: team anchor days, soft caps, live check-in data, no-show release, and overflow for spikes. Small offices have less pooling and need larger relative buffers.

Implementation recommendation

1. Plan capacity	Use ~1,400 seats; do not fit out the unmanaged peak as the default.
2. Manage demand	Set team anchor days and booking soft caps; preserve an overflow option.
3. Pilot and observe	Pilot at one office and collect booking, check-in, denial and no-show data.
4. Rightsize	Review after 8 weeks and calibrate capacity against observed peak demand.

Facilities KPI scorecard

Targets are illustrative; calibrate after a 4-8 week baseline.

Space efficiency

Peak-day utilization; weekday skew; cost / employee-day

Booking quality

Seat denial rate; no-show rate

Employee experience

Workplace CSAT; team co-presence

Service operations

Ticket SLA adherence; repeat-issue rate

Safety & compliance

Open critical incidents / findings; closure time

Sustainability + financial

Energy / occupied seat-day; budget variance / savings

Balanced pairs: utilization + denial rate + CSAT. Leading: booking/no-shows. Lagging: CSAT/cost.

Customer inputs and next steps

UNKNOWN inputs to collect

- Real headcount per office and country
- Working week, holidays, and local norms
- Hybrid policy and enforcement
- Badge, booking, ticket, utility and survey data
- Collaboration-space demand and lease constraints
